Vitropan® Textiles in Glass or Acrylic

As a competence and distribution partner of Vitropan®, we are delighted to introduce you to this exciting material. Vitropan® in glass or acrylic versions, with a laminated intermediate layer of three-dimensional textiles, is a material with outstanding optical and functional properties, creating a depth effect that has not been achieved before. The patented lamination process of the fabrics results in elegant, decorative, and particularly durable components with excellent UV resistance. This high-tech material opens up entirely new design possibilities.
