

03 Multiple award-winning.

Hits the mark: The prize-winning patterns from the «Collection – MDF patterned» were developed in close collaboration with six different designers, then engraved and cut in a multi-step process using a laser system. In 2018, sublidot's innovative laser technology also received the prestigious Red Dot Award.

01 A new dimension of creativity.

Laser sublimation from solid wood, veneer or any other desired organic material is for us both the present and a tool for the future. With that, strasserthun, founder of their own brand sublidot, particularly values the unique laser system, which can manipulate the material in an exceedingly gentle manner. Delicate and clean with complex object forms or sizes, this also generates a consistent quality in uneven forms. Creativity inherits a new dimension.
